

Roving Seminar

The main objective of these seminars is to make farmers more self-reliant by helping them become better informed about effective weather and climate risk management for the sustainable use of natural resources for agricultural production. Another objective is to increase the interactions between the farmers and the National Meteorological and Hydrological Services of the world. The Roving Seminars will help raise the awareness of the farming community of the current advances in the provision of weather and climate information for facilitating operational decisions on farm. Feedback obtained from the farmers will help the personnel from the Meteorological Services and the Agricultural Extension Agencies to design more improved products for use by farmers and to improve the channels of communication to provide information to the farmers. Summary reports from the seminars will help to understand the current methods of weather and climate risk management at the farm level in different parts of the world and help introduce improved risk management tools for the farming community.
